

# Getting Started with ReactJS

**\*\***<https://www.geeksforgeeks.org/reactjs/>

## Prerequisites

- Know HTML and CSS
- Know JavaScript
- Know DOM
- Node.js and npm installed globally

## Setup

- 1) Create a package.json file.

Go to the directory where the project is located.

Open Git bash at the directory location.

From your Git bash command line, type

`npm init`

Go through the directions that will appear and then your package.json file is created.

- 2) Make a basic HTML file.

- 3) Create a JS file. This is where the React components are located.

- 4) Create a CSS file.

## Run the application

Go to the directory where the project is located.

Open Git bash at the directory location.

From your Git bash command line, type

`npm install`

then

`npm start`

This will run the app.

Open the <http://localhost:3000> or the given localhost in the browser.

Now you will be able to see the website.
