Git Commands List:

git checkout "branch name" – move to the branch stated in the command

git pull origin "branch name" – get files from the repository to your local directory

git push origin "branch name" – push changes to fork repository

git commit -m "commit message" – commit files to repository

git status – check changes staged for commit

How to add changes to local branch

1. Push to local branch
2. Pull newest updates from master
